

## Installation

### Installation window 1

**Double-click** on the Exe-File will start the installation process.

After a very short extraction, a window opens with the selection option:

- default
- Custom
- Download media

Choose default

Accept license terms by clicking next

Installation path, confirm the default path with clicking Install

SQL gets installed

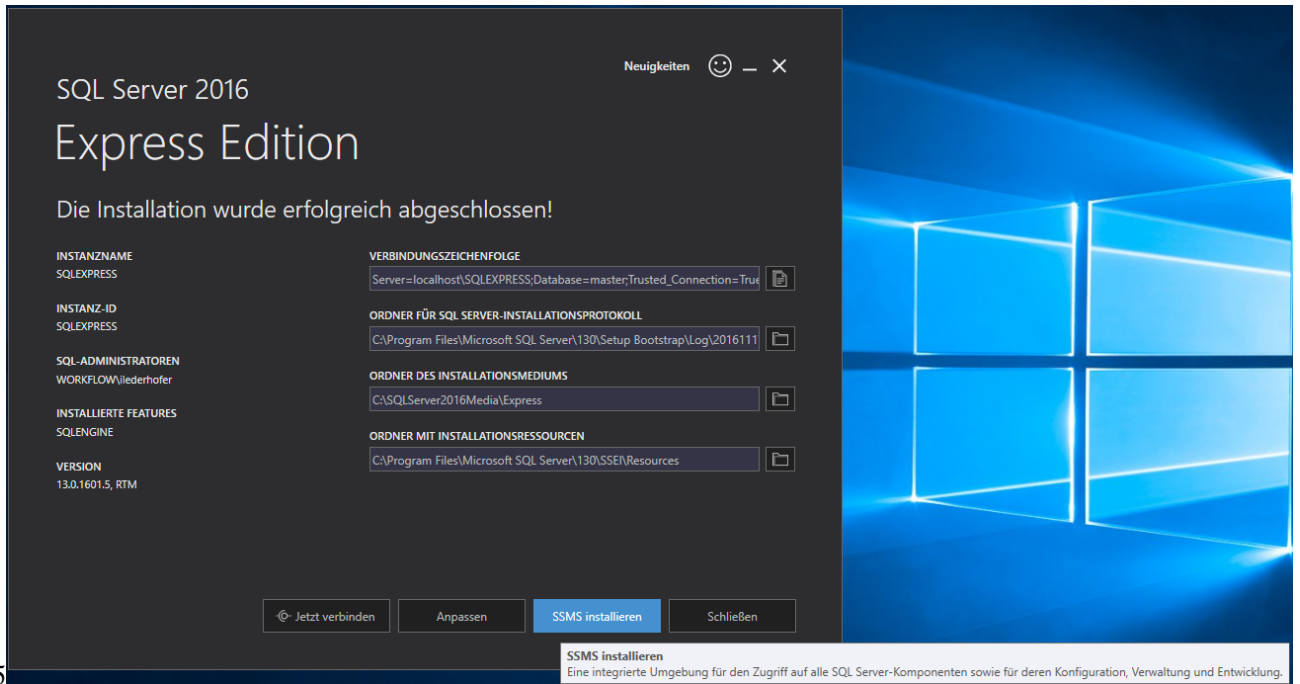

After the Installation process is done a number of prefilled filenames appear in this window and some buttons in the lower area:

- Connect now (opens a prompt)
- To adjust

- Install SSMS
- Close

Check in the **Windows services** whether SQL Server service is running: yes

Click on **install SSMS** opens a page in the browser with the link to download SQL Server Management Studio

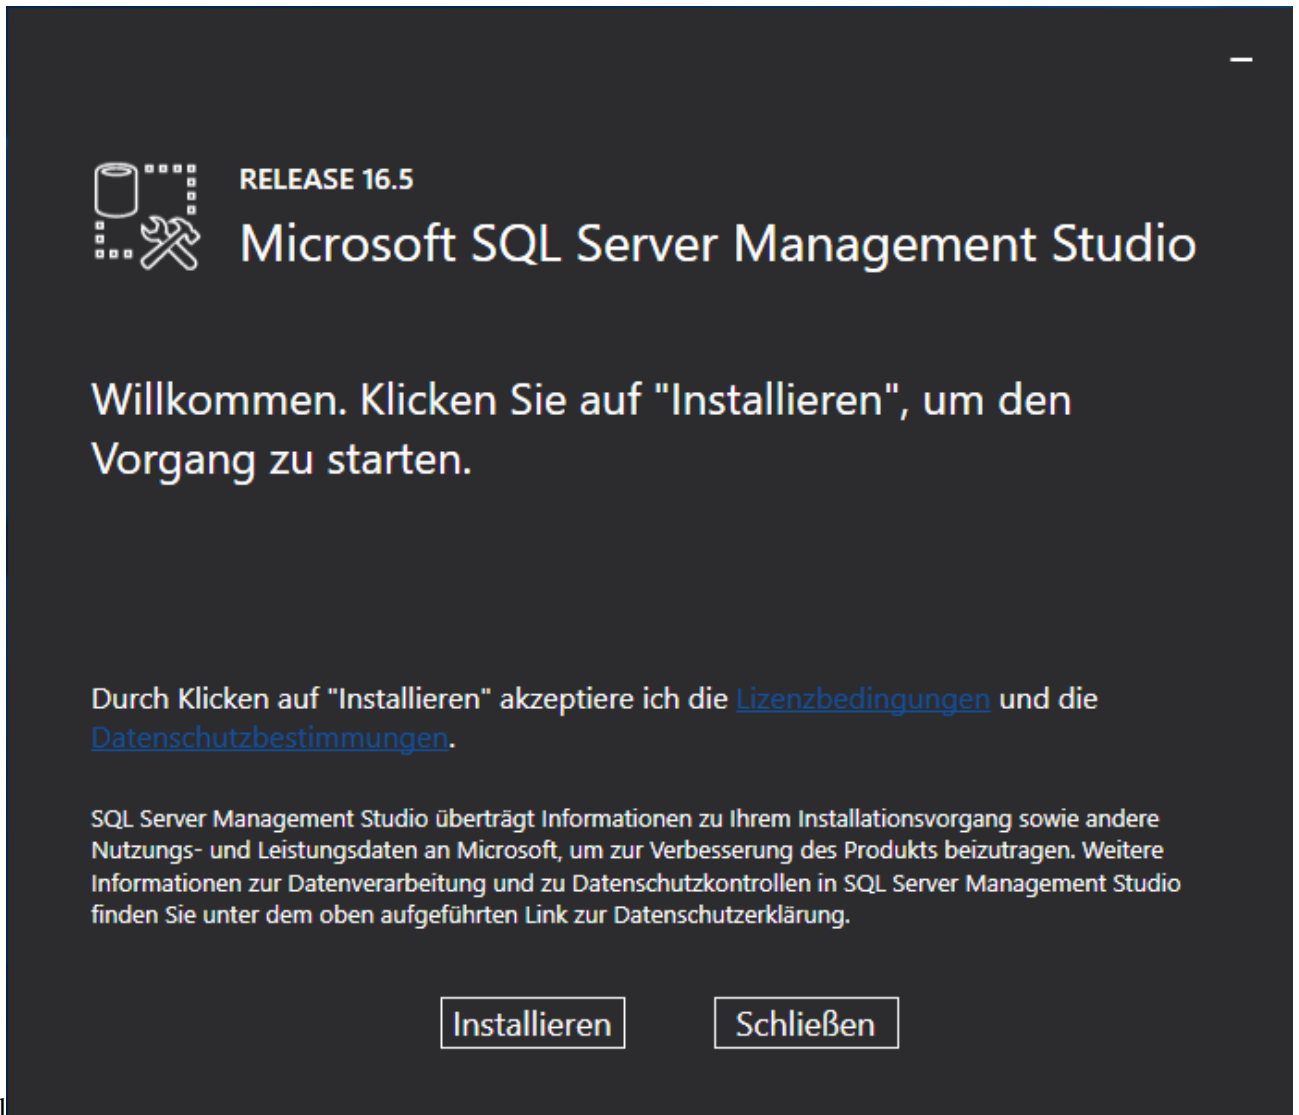

Minimize the current Installation window

## Installation window 2

**Double-click** on the File SSMS-XXX.exe starts the Installation

License and Privacy Policy, appear in the installation window, click

Install

After installation, the **Close** button appears

## Installation window 1

Reopen the minimized Installation window, click **To adjust**
