Ptm Cost Object Connector

This connector makes it possible to export **Cost Objects** to a file (acting as source connector) or to import them into the system (as a destination connector).

Therefore you need to map and connect the following fields:

name	Name of the cost object that is to be imported into the system or written to a file.
foreignID	Foreign ID that is to be imported as a connection to third-party systems or written to a file.
description	Description of the cost object that is to be imported into or exported from the system.
$costCenter	Cost center to which the imported/exported cost object is to be connected.
$this	This field is developer-specific and cannot be used by the standard administrator or user.

Felder

Name	Wert
Modul	Project Time Management (ptm)
Webdesk Actionname	PtmCostObjectConnector
Artefakt-Typ	Connector
